Communication Plan

1	Communications with the field team have been inactive based on the agreed Check-in Schedule				
2	An incident occurs in the field that warrants execution				
3	An emergency situation arises from an external source e.g. bushfire, severe weather event				
Checklist					
Is the site remote or will staff be isolated?	X	Yes		No	
Are fieldwork call in procedures required?	X	Yes		No	
Communication equipment required (select all that apply)					
X	Mobile Phone	<i>For general communications, check-ins, instigating search and rescue</i>			
	UHF Radio	<i>To be advised in toolbox/pre-start</i>			
X	In Reach	<i>For remote/ isolated work and night fieldwork as indicated</i>			
	Ranger radio	<i>For remote and/isolated work and communication with Parks staff</i>			
Check-in:		You MUST contact the Office on 0472 569 988 to complete your Check-In's.			
Onsite Communication and Risk Management Policy					
Purpose					
To ensure the safety, efficiency, and well-being of all personnel engaged in fieldwork by establishing clear communication protocols, identifying potential risks, and outlining mitigation strategies.					
1. Risk Awareness and Management					
Fieldwork Hazards	Fieldwork presents varying levels of risk, some of which may be life-threatening or impact an individual's mental, cognitive, or physical state. Continuous monitoring, reviewing, and adjusting of risk assessments is essential. Early intervention is key to preventing serious incidents.				
Dynamic Fieldwork Planning	Fieldwork plans must be actively monitored and reviewed by all staff. The Field Lead is responsible for making necessary adjustments <i>(in consultation with the Project Lead and Project Manager)</i> and communicating changes to all onsite personnel.				
Stakeholder Interaction Risks	Extended interactions with stakeholders can affect fieldwork efficiency and may lead to fatigue or conflict, especially when dealing with difficult individuals. All staff must strictly adhere to the confidentiality policy when engaging with stakeholders or any non-project personnel.				
2. Mitigation Measures					
Timed Check-ins	All staff are required to perform timed check-ins to report WHS issues, confirm their location, and provide health status updates.				
Real-Time Engagement	Field staff must maintain real-time communication with stakeholder contacts and Ecology Office to ensure alignment and responsiveness.				
3. Communication Approach					
Defined Check-in Protocols	Each fieldwork assignment includes pre-agreed check-in events with defined timing tolerances. These provide assurance that staff are safe and accounted for. Check-In 1: Prior to staff leaving base Check-in 2: Upon arrival at Project location OR accommodation, OR stopping point Check-in 3: Prior to leaving Project location OR next stopping point Check-in 4: Upon arriving back to base <i>Check-in text messages are to be sent to 0472 569 988</i>				

Acknowledgement of Check-ins	All check-ins must be acknowledged by the receiving party.						
Contact Information	Emergency Management Plan to include: - Internal Contacts, <i>including the WHS Officer</i> - Stakeholder contact details						
4. Emergency Intervention							
Emergency Management Plan Activation	The Emergency Management Plan will be triggered in the event of: - A self-initiated alert via In Reach, EPIRB, or mobile phone - A missed check-in beyond the agreed tolerance window						
5. Enabling Technology							
Check-in Equipment	The technology used for check-ins is defined per assignment. All team members must be trained and competent in the use of these tools.
